

Ognjen Glamočanin

COMPUTER SCIENCE PH.D. GRADUATE, SWE AT GOOGLE DEEPMIND

☎ (+41) 078-948-15-35 | ✉ o.glamocanin@gmail.com

Education

EPFL, Ecole Polytechnique Fédérale de Lausanne

Lausanne, Switzerland

PH.D. IN COMPUTER SCIENCE

2018 – 2023

- Thesis: Evaluating, Exploiting, and Hiding Power Side-Channel Leakage of Remote FPGAs
- Research focus: FPGA security and power side-channel attacks, cloud FPGAs, and multi-tenant FPGAs
- Thesis advisors: Dr. Mirjana Stojilović and Prof. Babak Falsafi
- Relevant experience: RTL/FPGA design/verification, accelerator design, C/C++, Python ML (Pandas, Keras, WandB), computer architecture

Sorbonne Université, Paris VI

Paris, France

M.S. IN COMPUTER SCIENCE

2017 – 2018

University of Novi Sad, Faculty of Technical Sciences

Novi Sad, Serbia

B.S. WITH HONOURS IN ELECTRICAL ENGINEERING

2013 – 2017

Work Experience

Google Deepmind

Zurich, Switzerland

SOFTWARE ENGINEER (SWE)

Aug 2025 – ongoing

- Building infrastructure and tools for AI chip design.

Synthara AG

Zurich, Switzerland

COMPUTER ENGINEER

Sep 2023 – Aug 2025

- Performed **verification** of Synthara's ComputeRAM™ AI accelerator, used **SystemVerilog** and **UVM** for module and system-level verification.
- Created a **cycle-accurate software model** of the ComputeRAM™ accelerator, allowing fast power and performance evaluation in larger systems.
- Integrated ComputeRAM™ in a **RISC-V-based FPGA** prototyping system, and wrote software in **C/C++** for testing and performance evaluation.
- Designed an **AXI4-Full** interconnect router, allowing maximal throughput communication between a source and multiple destinations.

EPFL

Lausanne, Switzerland

DOCTORAL RESEARCHER IN HARDWARE AND FPGA SECURITY

Sep 2018 – Aug 2023

- Investigated **security** of FPGA-based heterogeneous systems, and how access to reconfigurable hardware can compromise or enhance security.
- Designed FPGA systems (accelerators/sensors/controllers) in **Verilog/VHDL** to analyze power side-channel security of hardware accelerators.
- Designed **novel voltage sensor** architectures on FPGAs, recording internal voltage fluctuations and side-channel leakage inside FPGAs.
- Designed **software** in **C/C++/Python** to control the FPGA hardware and collect, store, and analyze large quantities (TBs) of data.
- Used **deep learning** techniques in **Python TensorFlow** to evaluate and analyze the power consumption of an FPGA-based **RISC-V** CPU.
- Used **Python WandB/Bash/Docker/Kubernetes** to streamline and automate **training and exploration of ML models** on the EPFL GPU cluster.
- Worked with **Xilinx FPGAs**, from low- and mid-end (Artix-7, Zynq-7000, Kintex-7) to high-end cloud FPGAs (UltraScale+ Alveo and AWS F1).

ARM

Sophia Antipolis, France

CPU MICROARCHITECTURE AND DESIGN INTERN

Mar 2018 – Aug 2020

- Analyzed **CPU microarchitectural events** for the purposes of **power consumption estimation** during cycle-accurate simulation.
- Used **ML in Python TensorFlow** to model the correlation between CPU events and power consumption simulated in **Cadence Joules**.
- Enabled power estimation in early microarchitecture design stages by integrating power prediction in a **C/C++** cycle-accurate simulator.

FROBAS D.O.O.

Novi Sad, Serbia

MACHINE LEARNING HARDWARE ACCELERATION INTERN

Nov 2016 – Jun 2017

- Used **VHDL** to design and verify a **neural network hardware accelerator** for multi-layer perceptron (MLP) artificial neural networks (ANNs).

ELSYS EASTERN EUROPE

Belgrade, Serbia

HARDWARE FUNCTIONAL VERIFICATION INTERN

Jul 2016 – Oct 2016

- Used **SystemVerilog** and the **UVM** methodology to build a functional verification environment for an OCP2UART bridge.

Technical Skills

Programming and scripting languages:

C/C++ (10 yrs), Python (6 yrs), SystemVerilog (10 yrs), Bash (8 yrs), TCL (8 yrs)

ML languages and tools:

Python (Keras, TensorFlow, Weights and Biases, Pandas), Docker, Kubernetes, RunAI

Cloud frameworks:

AWS EC2, Microsoft Azure, Google Cloud, CoreWeave

Digital design and FPGA development:

RTL design, FPGA design (AMD 7-series, UltraScale+ in Alveo boards), RTL verification (UVM)

Hardware description languages:

VHDL (10 yrs), Verilog (10 yrs), SystemVerilog (10 yrs), SystemC

CAD EDA tools:

Vivado, Vitis, Xilinx ISE, ModelSim, Cadence Xcelium, Synopsys VCS, Synopsys SpyGlass

Publications

Instruction-Level Power Leakage Evaluation of Soft-Core CPUs on Shared FPGAs

HaSS

O. GLAMOČANIN, S. SHRIVASTAVA, J. YAO, N. ARDO, M. PAYER, M. STOJILLOVIĆ

2023

- Used **deep learning** techniques in **Python Keras** to evaluate the instruction-level power leakage of **RISC-V softcore CPUs** in shared FPGAs.
- Used **Python WandB**, **Bash**, **Docker**, and **Kubernetes** to streamline and automate **training and exploration of ML model hyperparameters**.
- Evaluated the impact of the **FPGA** family, code template structure, preprocessing, and trace averaging on the model accuracy.

Active Wire Fences for Multi-Tenant FPGAs (Best Paper Award Nomination)

DDECS

O. GLAMOČANIN, A. KOSTIĆ, S. KOSTIĆ, M. STOJILLOVIĆ

2023

- Created a novel wire-based **FPGA** power waster architecture using **VHDL** and **XDC**, with no resource overhead compared to the state of the art.
- Deployed a **CUDA**-accelerated power analysis attack on CoreWeave cloud instances with Nvidia A100-80GB GPUs.

RDS: FPGA Routing Delay Sensors for Effective Remote Power Analysis Attacks

TCHES

D. SPIELMANN*, O. GLAMOČANIN*, M. STOJILLOVIĆ (* EQUAL CONTRIBUTION)

2023

- Designed a novel routing-based FPGA voltage sensor architecture using **VHDL** and **Vivado**, with superior sensing than the state of the art.
- Designed an AXI4-Full **Vitis** RTL kernel for the **Alveo U200 FPGA card**, used for recording and saving encryption power traces.
- Implemented a **C++** interface for the RTL kernel to record millions of power traces and a **Bash** script to automate the trace collection process.

Temperature Impact on Remote Power Side-Channel Attacks on Shared FPGAs

DATE

O. GLAMOČANIN, H. BAZAZ, M. PAYER, M. STOJILLOVIĆ

2023

- Analyzed the temperature impact on **FPGA** voltage sensors and remote power analysis attacks.
- Quantified the impact of temperature effects on statistical (CPA on AES encryption) and ML profiling power analysis attacks.

The Side-Channel Metrics Cheat Sheet

CSUR

K. PAPAGIANNOPOULOS*, O. GLAMOČANIN*, M. AZOUAOU*, D. ROS*, F. REGAZZONI*, M. STOJILLOVIĆ* (* EQUAL CONTRIBUTION)

2022

- Analyzed and compared methods for power side-channel security evaluation, both theoretically and experimentally.
- Contributed to MetriSCA, a **C++** open-source library of metrics for power side-channel analysis accompanying the publication.

Improving First-Order Threshold Implementations of SKINNY

INDOCRYPT

A. CAFORIO, D. COLLINS, O. GLAMOČANIN, AND S. BANIK

2021

- Worked on an efficient threshold implementation protection against power side-channel attacks for the SKINNY cipher, written in **VHDL**.
- Implemented and evaluated the design on **FPGA** using **Xilinx Vivado**, showing no existence of first-order power side-channel leakage.

Shared FPGAs and the Holy Grail: Protections Against Side-Channel and Fault Attacks

DATE

O. GLAMOČANIN*, D. G. MAHMOUD*, F. REGAZZONI, AND M. STOJILLOVIĆ (* EQUAL CONTRIBUTION)

2021

- Analyzed recently proposed methods for protection against side-channel and fault attacks in shared FPGAs.
- Provided insights on the versatility and inter-operability of the countermeasures, with an emphasis on future research directions.

Are Cloud FPGAs Really Vulnerable to Power-Analysis Attacks?

DATE

O. GLAMOČANIN, L. COULON, F. REGAZZONI, AND M. STOJILLOVIĆ

2020

- Implemented an **FPGA** voltage sensor on state-of-the-art cloud FPGAs (**Xilinx UltraScale+** on **AWS EC2 F1 instances**) using **VHDL** and **Vivado**.
- Demonstrated the first remote power side-channel attack on cloud-scale FPGAs.

Built-In Self-Evaluation of First-Order Power Side-Channel Leakage for FPGAs

ISFPGA

O. GLAMOČANIN, L. COULON, F. REGAZZONI, AND M. STOJILLOVIĆ

2020

- Used **SystemC** and **VHDL** to implement a fixed-point DSP system on **FPGA** to calculate the statistical *t*-test.
- Showed that FPGA-based voltage sensors and the *t*-test can be used for remote power side-channel leakage estimation.

Honors & Awards

2023 **Nomination for the EPFL Doctoral Program Thesis Distinction,**

Switzerland

Award for the best 8% theses, 30% nomination rate

2018 **EPFL EDIC Fellowship,**

Switzerland

Fellowship for first-year Ph.D. students

2017 **French Government Scholarship for International Students,**

France

Full scholarship for master studies in France

2016 **Dr Vladan Desnica Award,**

Serbia

Best student of the microcomputer electronics track

Languages

Serbian: native

English: fluent (level C2)

French: fluent (level C1)
